What is mental imagery?

Akansha Mahesh Naraindas, Sarah Maeve Cooney. Assessing body-related mental imagery in individuals with Anorexia Nervosa and Bulimia Nervosa. PROSPERO 2022 CRD42022358412 Available from: https://www.crd.york.ac.uk/prospero/display_record.php?ID=CRD42022358412

Pubmed, Psycinfo, EBSCO

The Allocentric lock Theory: (Riva 2012; Riva 2018)

The Allocentric lock Theory: (Riva 2012; Riva 2018)

Age groups

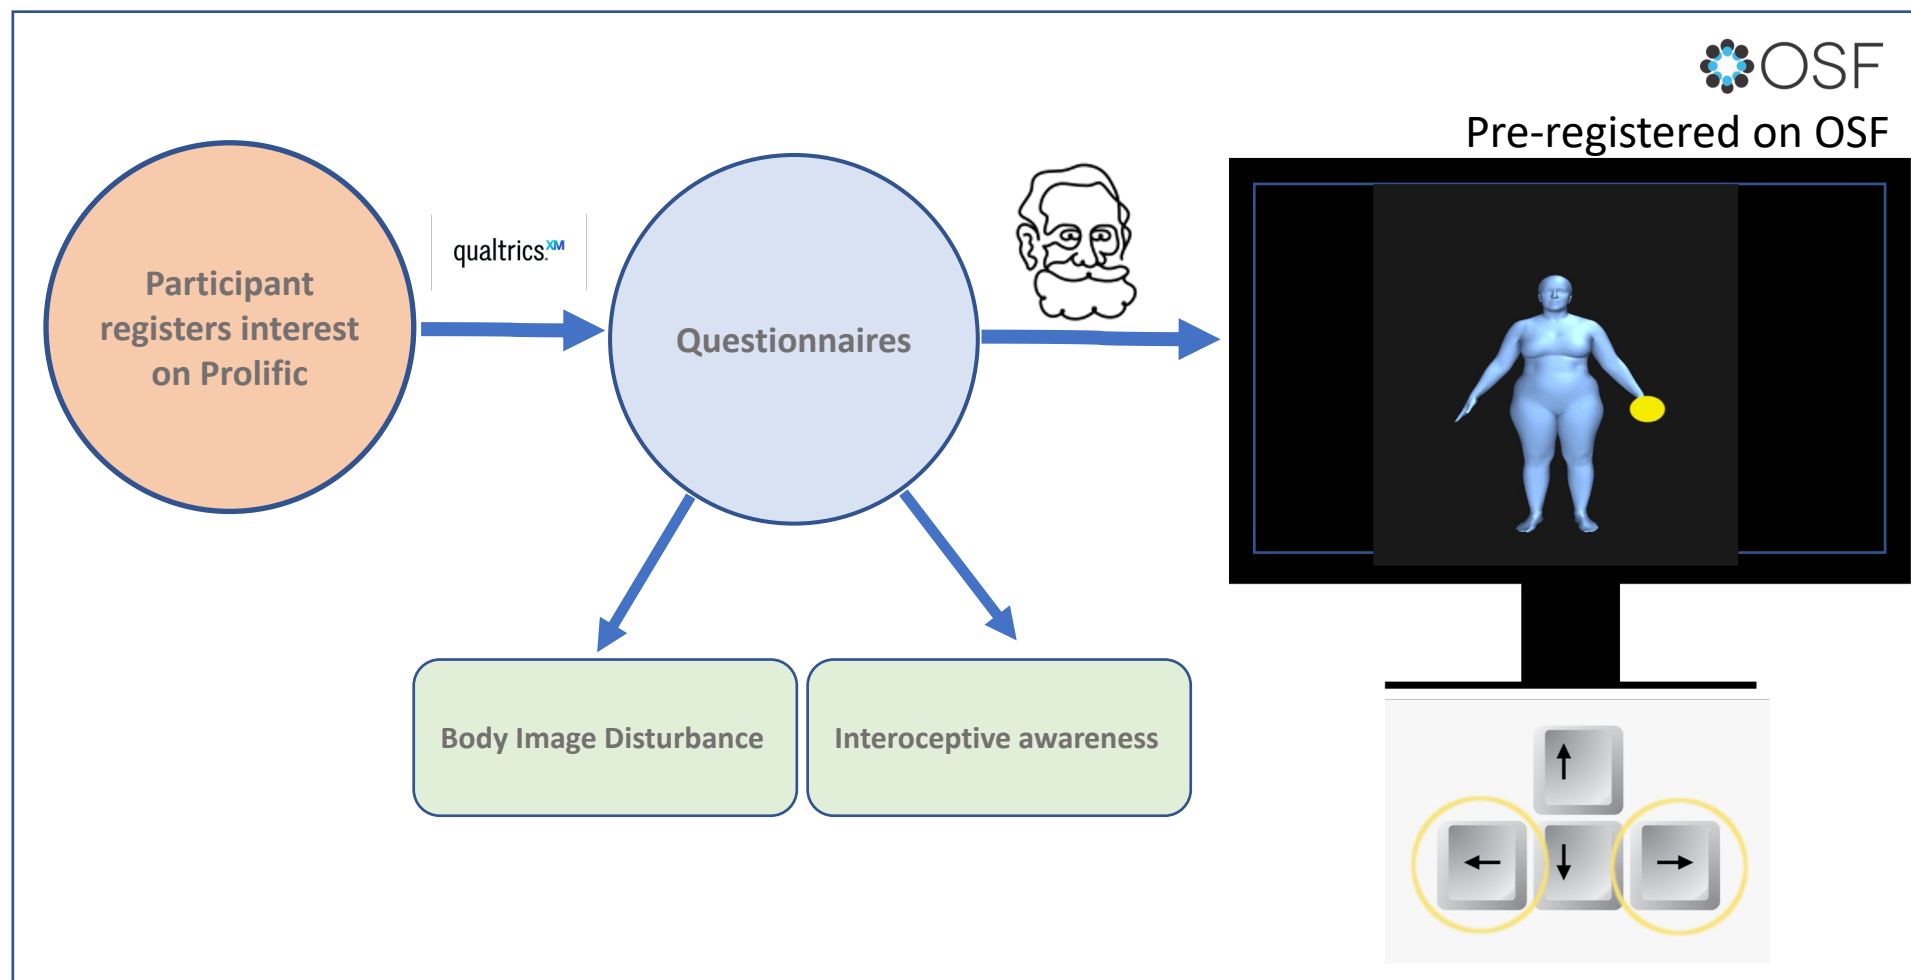

N= 1500

Young Adults (18-24)

Adults (25-39)

Middle adults (40-59)

Older adults (60-75)

Which hand?

Blanke O, Mohr C, Michel CM, Pascual-Leone A, Brugger P, Seeck M, Landis T, Thut G. Linking out-of-body experience and self processing to mental own-body imagery at the temporoparietal junction. *J Neurosci*. 2005 Jan 19;25(3):550-7. doi: 10.1523/JNEUROSCI.2612-04.2005. PMID: 15659590; PMCID: PMC6725328.

How does
body image
disturbance
change
across
female
adulthood?

N=1500

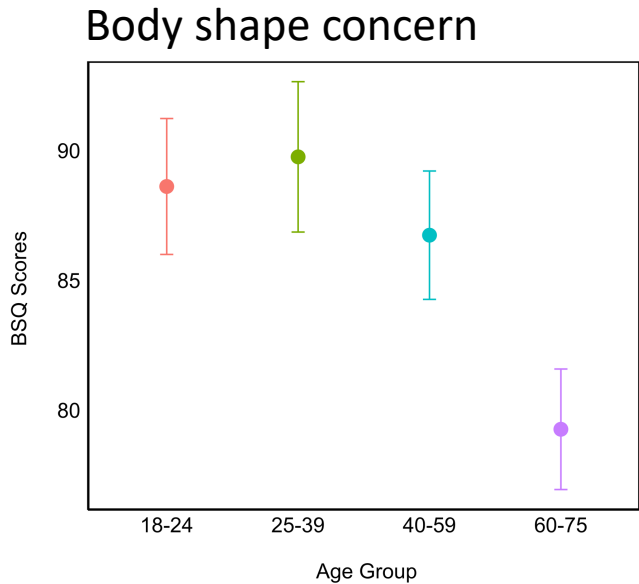

Figure 2. Mean body shape concern scores by age group

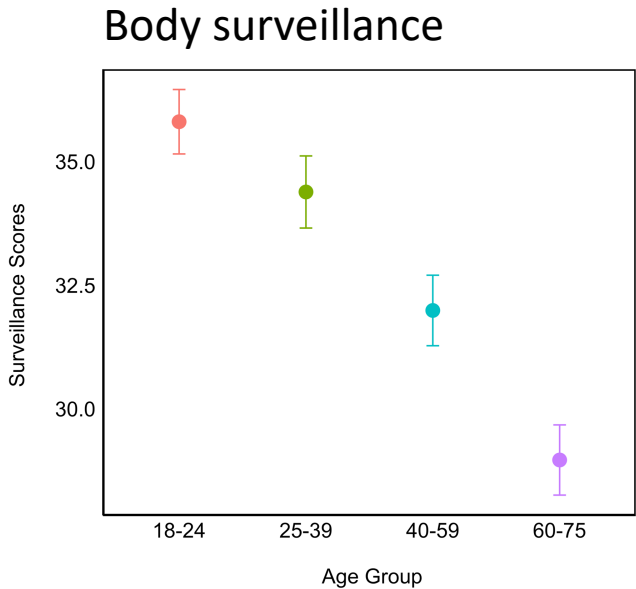

Figure 3. Mean body surveillance scores by age group

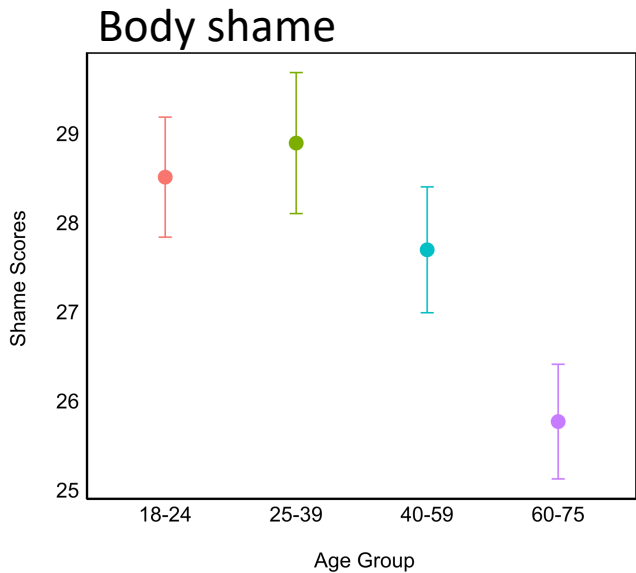

Figure 4. Mean body shame scores by age group

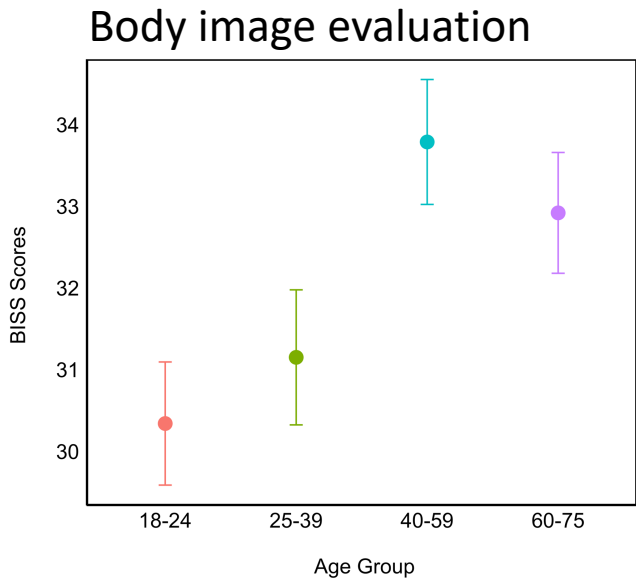

Figure 5. Mean body image state scale scores by age group

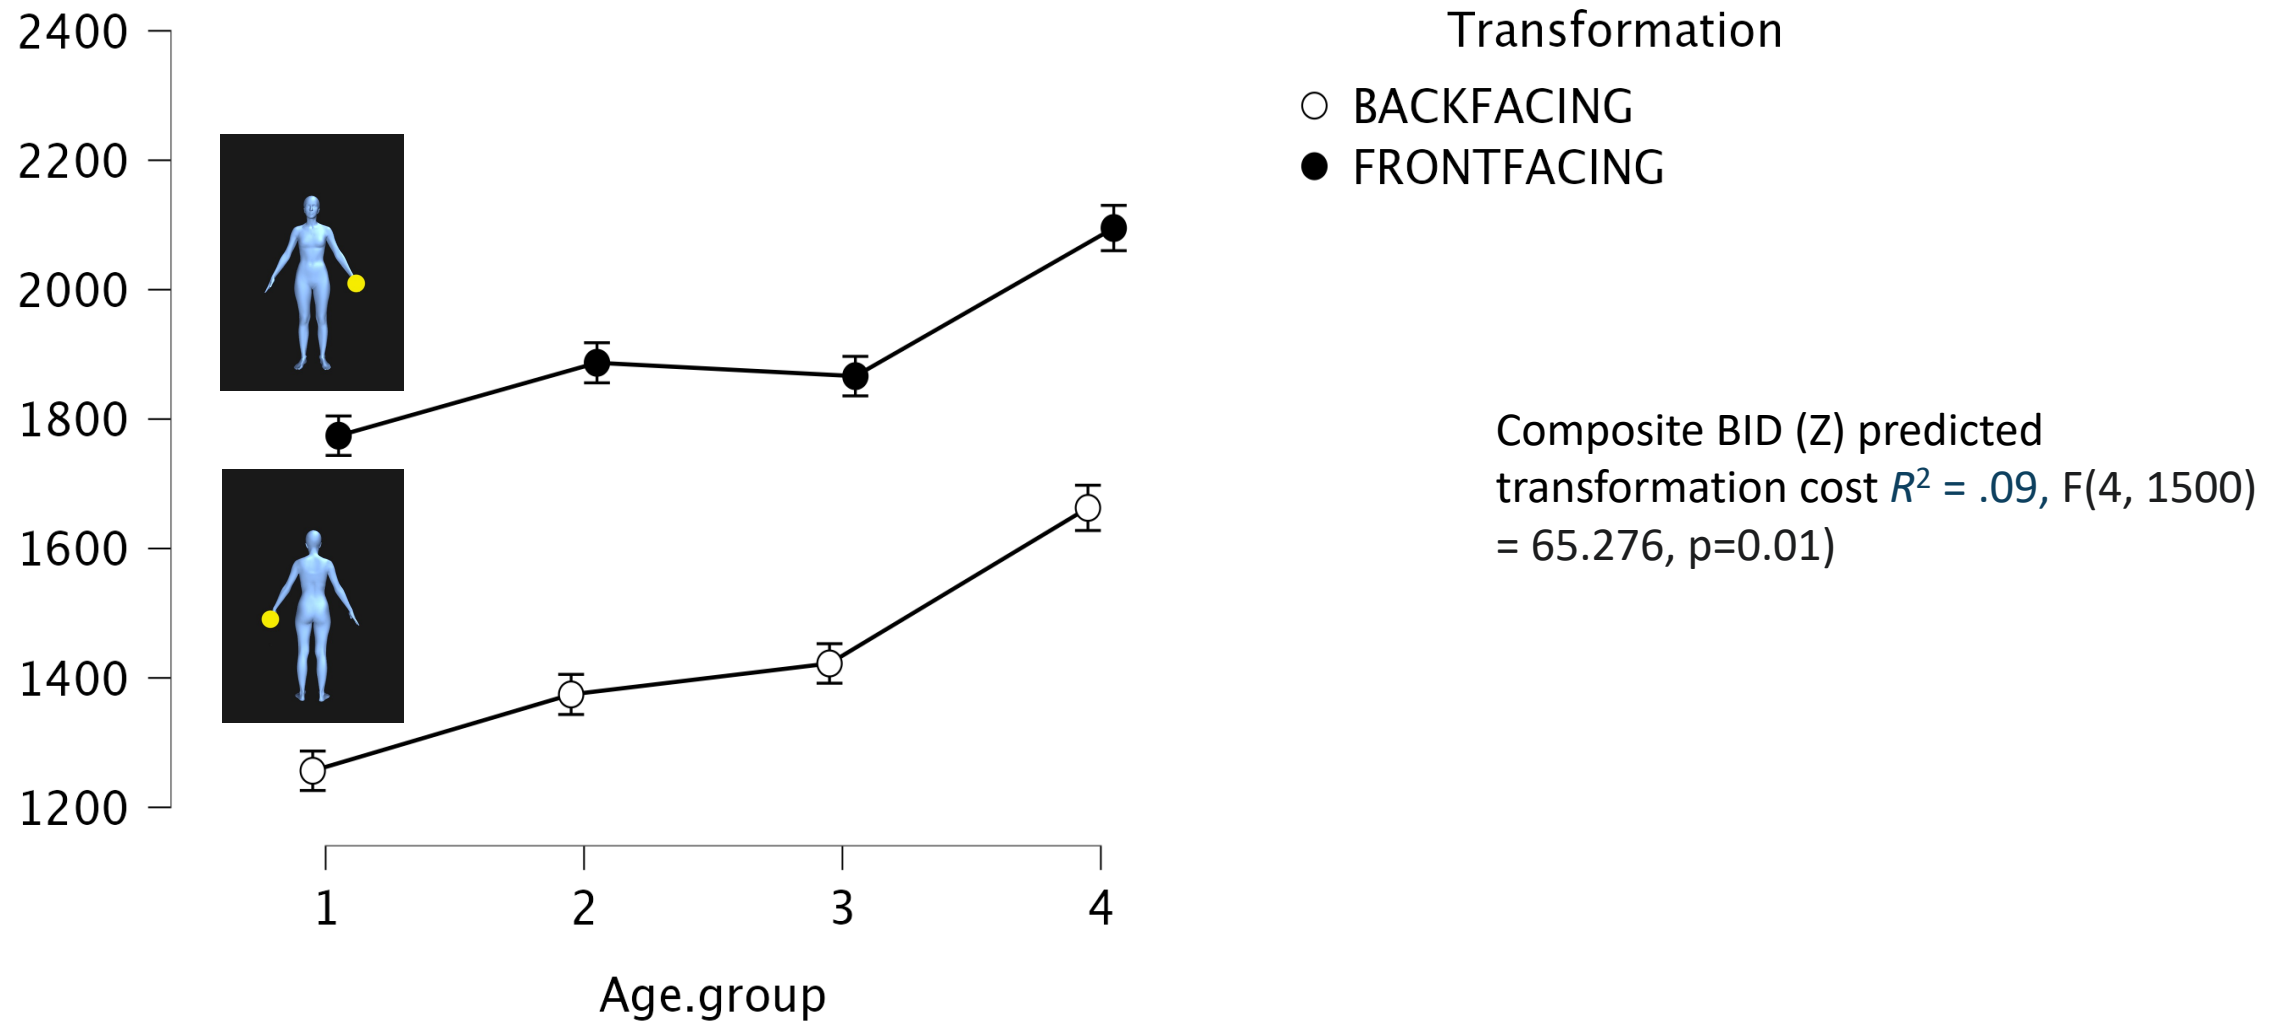

Figure 6. plot showing Mean reaction times (ms) and 95 CI for Frontfacing and Backfacing figures across 4 age groups; 1 = Young Adults, 2 = Adults, 3 = Middle Adults and 4 = Older Adults

Mental imagery considerations

- How has body based mental imagery been measured?

Akansha Mahesh Naraindas, Sarah Maeve Cooney. Assessing body-related mental imagery in individuals with Anorexia Nervosa and Bulimia Nervosa. PROSPERO 2022 CRD42022358412 Available from: https://www.crd.york.ac.uk/prospERO/display_record.php?ID=CRD42022358412

- Are surface based markers related to how accurate healthy individuals are in estimating their body size and shape from mental imagery, as measured on a 3D avatar?

Mapping body size estimation accuracy to brain regional cortical thickness – size and shape imagery - how accurately can we imagine our bodily dimensions.

How best do we measure online mental imagery/motor imagery/ visuospatial ability? What physiological indices can we use? (some advice for my study 3)

- Eye tracking studies for low level visual imagery
- Virtual reality – apertures, gait, rotation
- EEG?

How best can we capture body based mental imagery (accuracy estimation indices)

If you have an idea
